

Quick Reference Guide

Overall Structure

The **Master Risk Register** is the set of business wide risks that are centrally managed and approved, and form the basis for the **Templates**.

Each **Template** is a separately managed selection of Master Risks. The **Template** is the means by which Master Risks are added to a Child Risk Register. As many Templates as required can be created.

Each Child Risk Register is created by selecting 1 or more **Templates**. Each Template continues to exist within the Child Risk Register as a means of grouping or organising the risks. Templates can be re-named within the Child Risk Register to suit project specific terminology.

Unique risks (not added via a Template) can also be entered.
